WEATHER SYNOPSIS BY REGION

NORTHERN CALIFORNIA

***** Thunderstorms Northern and Eastern areas Late Today through Early Wednesday *****

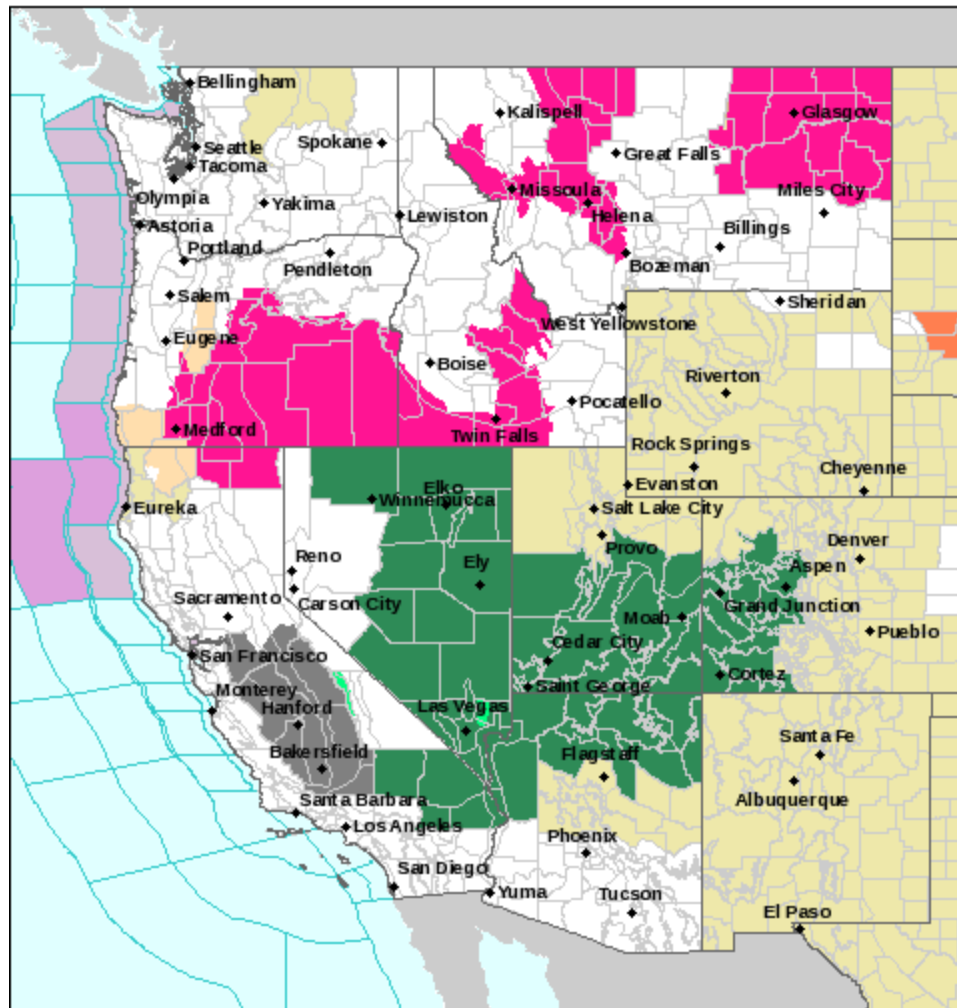

Moisture will continue to increase today, leading to scattered storms that produce a mixture of wet and dry strikes across our northern and eastern areas starting today and continuing into the overnight hours. Isolated thunderstorms are remotely possible today at lower elevations throughout the region as well. As the moisture increases over the area tonight through early Wednesday the storms will produce more rainfall, reducing the threat of dry strikes and new ignitions. Strong gusty outflow winds are possible with any thunderstorm. Dry SW flow will return by late Wednesday and continue through the end of the week.

SOUTHERN CALIFORNIA

*****Scattered thunderstorms through Tuesday*****

South flow aloft around a weak low off the Northern California Coast will bring scattered showers and thunderstorms to the mountains and deserts this afternoon through Tuesday afternoon. Some shower and thunderstorm activity may also affect the coastal and valley locations of the region tonight. Temperatures will slowly cool and humidity will increase significantly across the region through Tuesday. Maximum temperatures will be in the 80s to low 90s across the mountains and 90s to 102 in the valleys today and then cool into the upper 70s and 80s across the mountains and upper 80s and 90s in the valleys today and tomorrow. Minimum humidity will be mainly between 12% and 25% across Central California and above 30% across the region today. Most locations will have minimum humidity above 30% across the entire region by Tuesday. High pressure will strengthen and expand westward bringing a gradual warming and drying trend to the area Wednesday through the end of this week. Isolated afternoon showers and thunderstorms will form over the Sierra and over the mountains and deserts of the region east of I-15 Wednesday through the end of this week.
